This article will demonstrate how to use the Azure PowerShell to configure the Windows Azure Platform service. Azure PowerShell Overview: Azure PowerShell is an Azure client and a management framework to administer and manage Azure resources. It is an extension of the Windows PowerShell and provides capabilities for provisioning, configuration management, and operational management of Azure resources. Windows Azure PowerShell currently works with the full Windows Azure stack, including the components listed below. Windows Azure Compute Service: Offers scalable compute services that are billed on a pay-per-use model. Windows Azure Virtual Network Service: Provides the ability to create and manage virtual network resources. Windows Azure Storage Service: Provides a service for cloud storage. In addition to managing the Windows Azure Compute Service, Virtual Network Service, and Storage Service through Windows Azure PowerShell, you can manage the Windows Azure Service Management Portal. Important The Windows Azure Platform provides the ability to connect from the command line to Azure services. When you connect from the command line, use the full path to the Windows Azure command-line interface (CLI) executable. For example, if the Windows Azure CLI is installed in the C:\Program Files\Windows Azure directory, then you would use C:\Program Files\Windows Azure\bin\Windows Azure. NOTE: For a new installation of the Windows Azure Platform, the Windows Azure Command-line interface (CLI) should be downloaded from the Windows Azure Marketplace. To use Windows Azure PowerShell, you must first install the Windows Azure Platform with PowerShell. From your installation media, type the following command at the command prompt, and follow the instructions to install the Windows Azure Platform with PowerShell. > install -pa C:\tools\windows_azure_packages\WindowsAzurePackages Then, you will be prompted for the Windows Azure account to connect to, and the Windows Azure subscription credentials. If you are currently connected to a Windows Azure subscription, you will need to set the subscription credentials before using Windows Azure PowerShell. Windows Azure PS Module Note Windows Azure PowerShell is not installed by default. You can import the Windows Azure PS module by typing the following command. Import-Module -Name WindowsAzure.Services Use Windows Azure PowerShell to Create a Windows Azure Account To use Windows Azure PowerShell, you must first create an Azure account. You can create an Azure account from the Windows Azure portal or by
