ScriptCryptor is a Visual Basic or Java script compiler that can help you easily and quickly generate EXE files from your source code. It also comes with a simple user interface and a few handy options that allow you to encrypt your scripts in a stealthy manner. You can also attach an application icon to the generated EXE file. I have tried using different software to encrypt my code but all the time I use to waste a lot of time finding and decrypting the source code. So it is the first time I found this program and it is really effective and helpful, it can quickly convert any Java or VB source code into a runnable and usable application. I have used this program to create a Java server which runs on Windows, Mac and Android and it is great to know that it can also be used to create EXE files and thus distribute the server easily and without having to worry about the source code. In this ever-changing media age, the owners of the content are always seeking ways to recoup a reasonable amount of their investment. You don't need to be a software developer to recognize this problem, because every one of us has either been a part of it or will likely be a victim of it at some point. The good news is that there are tools out there to help you protect your works from being copied without your consent. All you need is a good copy of one of these tools to set things right. The author of the post below recommends some of these tools as well as some of the most popular HTML editors. Now, while these tools can do a lot of good, they can also be a bit complicated. Hence, there are also some simpler alternatives to choose from. The author shares these with you below. There are many new video sharing services which put a considerable load on computers. The other day I installed the website, which at the time was pretty easy to handle. Some time later, when I tried to download a file from the site, my computer ran out of memory. The load was overkill for my hardware. This isn't the case for everyone, though. If you can find a free host for

Unlike other similar tools, this application comes with a simple user interface, packs intuitive functions and embodies a handy configuration menu. The main window of ScriptCrytor.NET is divided into 3 tabs. The source code, version information and embedded files are displayed in the Source tab. The version information provides various details, including the company name, file description, legal copyrights, comments or product version. The version can be changed in a simple manner, which is handy when you want to compile more than one script. The third tab, the Embedded Files, is for you to embed additional documents into the compiled version of your script. You can easily compile scripts for 32-bit or 64-bit versions. The platform type is the only one that can be adjusted. This application is the lightweight alternative to previous applications like Avira AntiVir®. ScriptCrytor.NET Features Full Version The Full version is the single, most professional-grade package that includes almost all features for compiling scripts. There are no limitations and you can opt to compile as many scripts as you want. Xtreme Edition Xtreme Edition includes a slew of features that enhance the general performance, like the ability to compile more than one script at once and compile scripts with modified runtime environments. You will need to pay for Xtreme Edition, so you should consider this version before making your choice. ScriptType ScriptCrytor.NET supports JS, Visual Basic and C# scripts. You can use it to compile the latter into applications that can be used offline or online. You can pick which scripts to compile in this version. Licenses ScriptCrytor.NET is provided with various types of licenses. While the Full version comes with an unlimited license, the evaluation version is still available for a limited amount of time.
