PowerPoint's Data Macro feature enables you to create PowerPoint's Data Field to link to any data in an Excel spreadsheet, such as one of your company's databases. KEYMACRO's unique design lets you easily change the look of your data, such as format and size, and add your own data. Take advantage of the flexibility and power of PowerPoint and Excel! With the Data Macro function you can create a PowerPoint Data Field that links to any data in your Excel spreadsheet. If you insert a Data

---

Macro into a PowerPoint Slide, the format and size of the linked data is changed to match the one you entered in the Data Macro box. You can also enter and edit the data directly in the PowerPoint Data Macro box. Also, you can add your own data to the Data Macro box. This can be a digit or date to be displayed, such as your company's name, phone number, or fax number. When the PowerPoint presentation is opened, the data in the Excel spreadsheet will appear in the PowerPoint slide. Data Macro
