If you use Photoshop, you should keep your original files for future reference. You can use the Recent Files list on the Window menu to quickly locate a file. (See Book II Chapter 6 for details on the Window menu.) As with most Adobe products, you can get

Photoshop Elements, which is a program for editing digital photos and video (as well as doing a little bit of image manipulation). It's intended for entry-level users. This book is for getting the most from Adobe Photoshop CS6, which is one of the most powerful tools in your software bag. You won't find it in any book anywhere, and it's unique in that it's not only a photography application — unlike Elements, which is only a photo editing

program — but it's also a complete digital imaging program. An additional note for the inquiring photographer: To print photographs using standard inkjet printers, visit a photographic store to get a test print of your images. Most store employees, if they have the time and inclination to do so, can print a test page for you to see how your image prints to the paper and how it looks on the screen. This book's main reference is

Photoshop CS6. If you need to make changes, you can find them here. If you need to find information on some of the many Photoshop features, I provide a list in the book's appendix. The best way to pick up Photoshop is to read this book, which is all about techniques and strategies for image-editing success. It's divided into the following chapters, which you can use as chapters in your own book on Photoshop. Each chapter in the

book includes at least one color image of a single Photoshop feature to help you practice and understand the features. If you don't have Photoshop on your computer, don't sweat it. Go to the companion website for this book and follow the links for downloads of all the exercise files, as well as a full-color, easy-to-use book. Q: Ubuntu Server Install Script Issues I am trying to install ubuntu server version 12.04 LTS on a virtual system. The installation seems to go fine, however when the system reboots it states it is out of disk space. I tried to expand the disk using gparted, however the suggested method of expanding the disk with "using the disk setup" does not seem to work for me and

expanding the disk actually decreases the number of available space. The main partition already has the OS on it. I have been told that resizing the main partition is not possible, as I am creating a new partition to install the OS. Is there any way to repartition the main partition without a clean install of Ubuntu server? I have tried both using the CD and the USB stick. The server install did not work either. A: Resizing a partition without a clean install

might not be possible if your disk is close to full, which is what you say in the comments. The purpose of the gparted installer is to let you resize the partition, for example, by expanding it, without actually losing your data, while keeping the partition marked as active. This way, you have "extra disk space" that you can use later on, instead of having a full disk. However, this does not work well if you don't have an extra partition marked as active (the

one expanded by gparted), since the space from this partition will be used to expand the partition with the remaining space. The best option here is to install Ubuntu normally in the partition that you're trying to expand. If you have no extra diskspace, you can ask your host to boot from an Ubuntu CD that has Gparted on it, so you can expand your partition manually. So in my first week, I've found that it is quite hard to fit everything into a week and not get overwhelmed. But if I follow my own formula, I've made it and have planned my week better. Here's what I do: Review my to-do list every Sunday and look for any tasks that I can do each day in my spare time. Every evening, for

the next week, I write down all the tasks I need to get done for the day. Then I look for the time I have to get things done and when I arrive at work the next day, I check the list to see if there is anything I have to do immediately and get it out of the way. After lunch I still have a bit of time but I do not want to waste time as I have to be responsible for my tasks. So I will look through all of the tasks that need to be done and make sure that they are all

completed. Finish my tasks before 5pm and I will get a free dinner out with my colleagues which helps me not to feel bad when I am hungry. I normally finish all the tasks I have to do for that day and call in sick at 7pm on the day of work and rest so I can start the next day early and keep my responsibilities. I have to say that it is not always easy to manage my time as I am studying part time but I will make it work this week as I have never been so

productive in my life. A final note, before I go… Everyone has their own method and system which works well for them. If you are having any issues, I would love to hear from you! I hope this post has been helpful for some of you but I will be writing a new one every week so, let me know what you would like to read about.
