## SAMSUNG GALAXY S2 TO GET ANDROID 4.1 JELLY BEAN UPDATE

Samsung might have put off the global launch of the Galaxy Tab 3 for a couple of weeks, the tablet will be the first device to receive Android 4.2 Jelly Bean. Samsung delivers users first Android 4.1.2 Jelly Bean update for Galaxy Tab 3. for Samsung's Galaxy Tab 3 for more information on the Galaxy Tab 3, the Galaxy S2 boasts a number of capabilities. THE GALAXY TAB 3 IS THE TURBO BRAIN. not going to try to compete with the BlackBerry PlayBook when it comes to tablets. BUT, the tab 3 was launched at a time when there were a lot of competition. I think the real reason why it didn't launch with a 4.2 Jelly Bean update is the same reason why the Note II launched with 4.1 Jelly Bean instead of the Android 4.2: Samsung wanted the customers to have first hands on experience of it when the Note II came out. It's something like a prototype. So they don't want to get it finished and produce a 4.2 build of it at the same time the customer gets to play with it. The fact that the GS3 is the first one that is to receive 4.2 is because they already know that they can't use the Note for very long and they have to make it to the point where it is usable for most of the customers. If the Xoom is the first one to receive the Android 4.2, then the Tab is obviously the first one to receive Android 4.1.2 Jelly Bean because it is the very first one to see the update. We will have to wait till the SG52 gets updated in order to have a real and fair comparison of the two. By the way, there are a lot of rumors about the Tab 3 will get Android 4.2 Jelly Bean. A: The motivation for having Android 4.1.2 update first are to minimize the potential hurt to the sales of Galaxy Tab 3, because customers saw that Galaxy Tab 2 launched with Android 4.1 and it was immediately sold out (and still selling out today), and to avoid to confuse or even damage the reputation of this kind of device. But how do I know which carrier it's on? I'm assuming I can access my other apps using any wifi connection. Or is there a simple answer to that? A: Just to add to what David W. has already mentioned. You can determine your carrier and/or model number by accessing the Settings > About. This will give you your User Name, Device Name, Model, Carrier and OS Version. A: Another possibility is to enable "Developer Options" on the phone and/or see the Android version by accessing the Settings | About menu from the home screen. This is how I am "lucky" to have the model and carrier from the About screen. A: Android version To check the Android version, use: Settings > About. Carrier and model number The carrier and model number can be determined by using the Settings > About menu. Carrier If the model number is Samsung (or Nexus) you have a T-Mobile, Verizon, AT&T, GSM (GSM / HSPA / HSPA+) or China Telecom Model number T-Mobile S2 The Verizon, AT&T and GSM model numbers are: O2: VZP1440 0cc13bf012

9+ Galaxy Tab 3 7.0" SAMSUNG GALAXY S2 TO GET ANDROID 4.1 JELLY BEAN UPDATE Galaxy Tab 3 8.0" Latest News for: galaxy s2 android 4.2 jb "We're the first Android tablet to receive the upgrade as it's only been available on Samsung's flagship phones, and this means they have only been available on some of the largest in the marketplace. We're really excited about the upgrade as it enables us to deliver an even better experience, and the improvements in performance, build quality and design make this device the most attractive Android tablet in the market," said Gary Hui, vice president, In-Vehicle Systems, Samsung. "Samsung has done a great job to meet consumer demand for an affordable tablet that's ready to travel, and the Samsung Galaxy S2 is the perfect companion for people who want to take their mobile experience with them," said Paul Gains, senior vice president of product management, BlackBerry. Samsung has announced it will upgrade the Android 4.0 Ice Cream Sandwich OS to Android Jelly Bean OS 4.2 on its Galaxy S2 Android smartphone and tablet device. Touting a quick, efficient, and powerful 4G LTE network, the Galaxy S2 provides great speed and power when you are out and about in a dense urban environment. If you aren't familiar with the "Two Worlds" concept for Android 4.2 OS, it's a UI system that Samsung uses with its phones and tablets to recognize "security zones" around your device. It's pretty easy to use, but there's a lot more to it than you might think. This concept allows smartphones and tablets to interact with one another in a much more secure way. In some cases, it actually allows you to have a lot more control and the ability to protect the device from unauthorized uses. When you're running on LTE networks, you can use 4G LTE to download and launch apps (such as YouTube, Facebook, and even Twitter), as well as stream HD video. When you're indoors, Wi-Fi networks will perform much better. "The new Galaxy S2 Android OS comes equipped with more than 300 optimized apps that take advantage of the LTE network, including news, sports, weather, banking, and photo apps," said Seungjin "Gunjo" Lee, senior vice president of mobile communication products at Samsung Electronics.
